# ECO-FRIENDLY GLOWING SLIME

1 Mix together in a big bowl

2 Turn on a black light/UV light

1 cup of tonic water

2 cups of cornflour

**TIP:** You can get invisible ink pens (sometimes called spy pens) with an inbuilt UV lights from places like Kmart and Dollar Stores.

## How does it work?

Tonic water has something called quinine in it, which is fluorescent.

Fluorescent means that it can absorb (take in) the invisible ultraviolet light (UV) from the black light and emit (put out) visible light.

Quinine glows blue.

- 3
- Store in an airtight container.
  - Dilute it with lots of water before putting it down the sink!
