

Spaceship Imagine

You have been chosen for an extreme space mission.

In a specially designed spaceship, you will blast away from Earth and roam the galaxy. You will be in space for at least 20 years.

Just before you blast off, the spaceship will be sealed. For the whole 20 years, nothing will be able to get in or out – except for sunlight and other starlight.

There is *not* room on the ship to carry all the food and water you will need, or to store all your waste. The spaceship has artificial gravity.

Imagination time

- Who will you take with you?
- **What** will you take?
- What systems and gadgets will you design to help you survive?
- **You** decide!

I'm doomed to be alone forever.

Hello.

Sorry, little pile of rubbish. I'm too sad to talk.

Imagine
