

Build a wetland bug

By Esmé Dawson

How to play:

- 1 Cut out the kapowai | dragonfly body pieces. We've given you two sets, but photocopy if you need more.
- 2 Make the spinner.
- 3 All players get a set of legs to start.
- 4 Take turns spinning the spinner to collect one of each of the other five body parts (wings, thorax, abdomen, head, and antennae).
- 5 Better luck next time if you land on a piece you've already got.
- 6 First person to collect all the body parts and put them together in the right order is the winner.

Ponderer

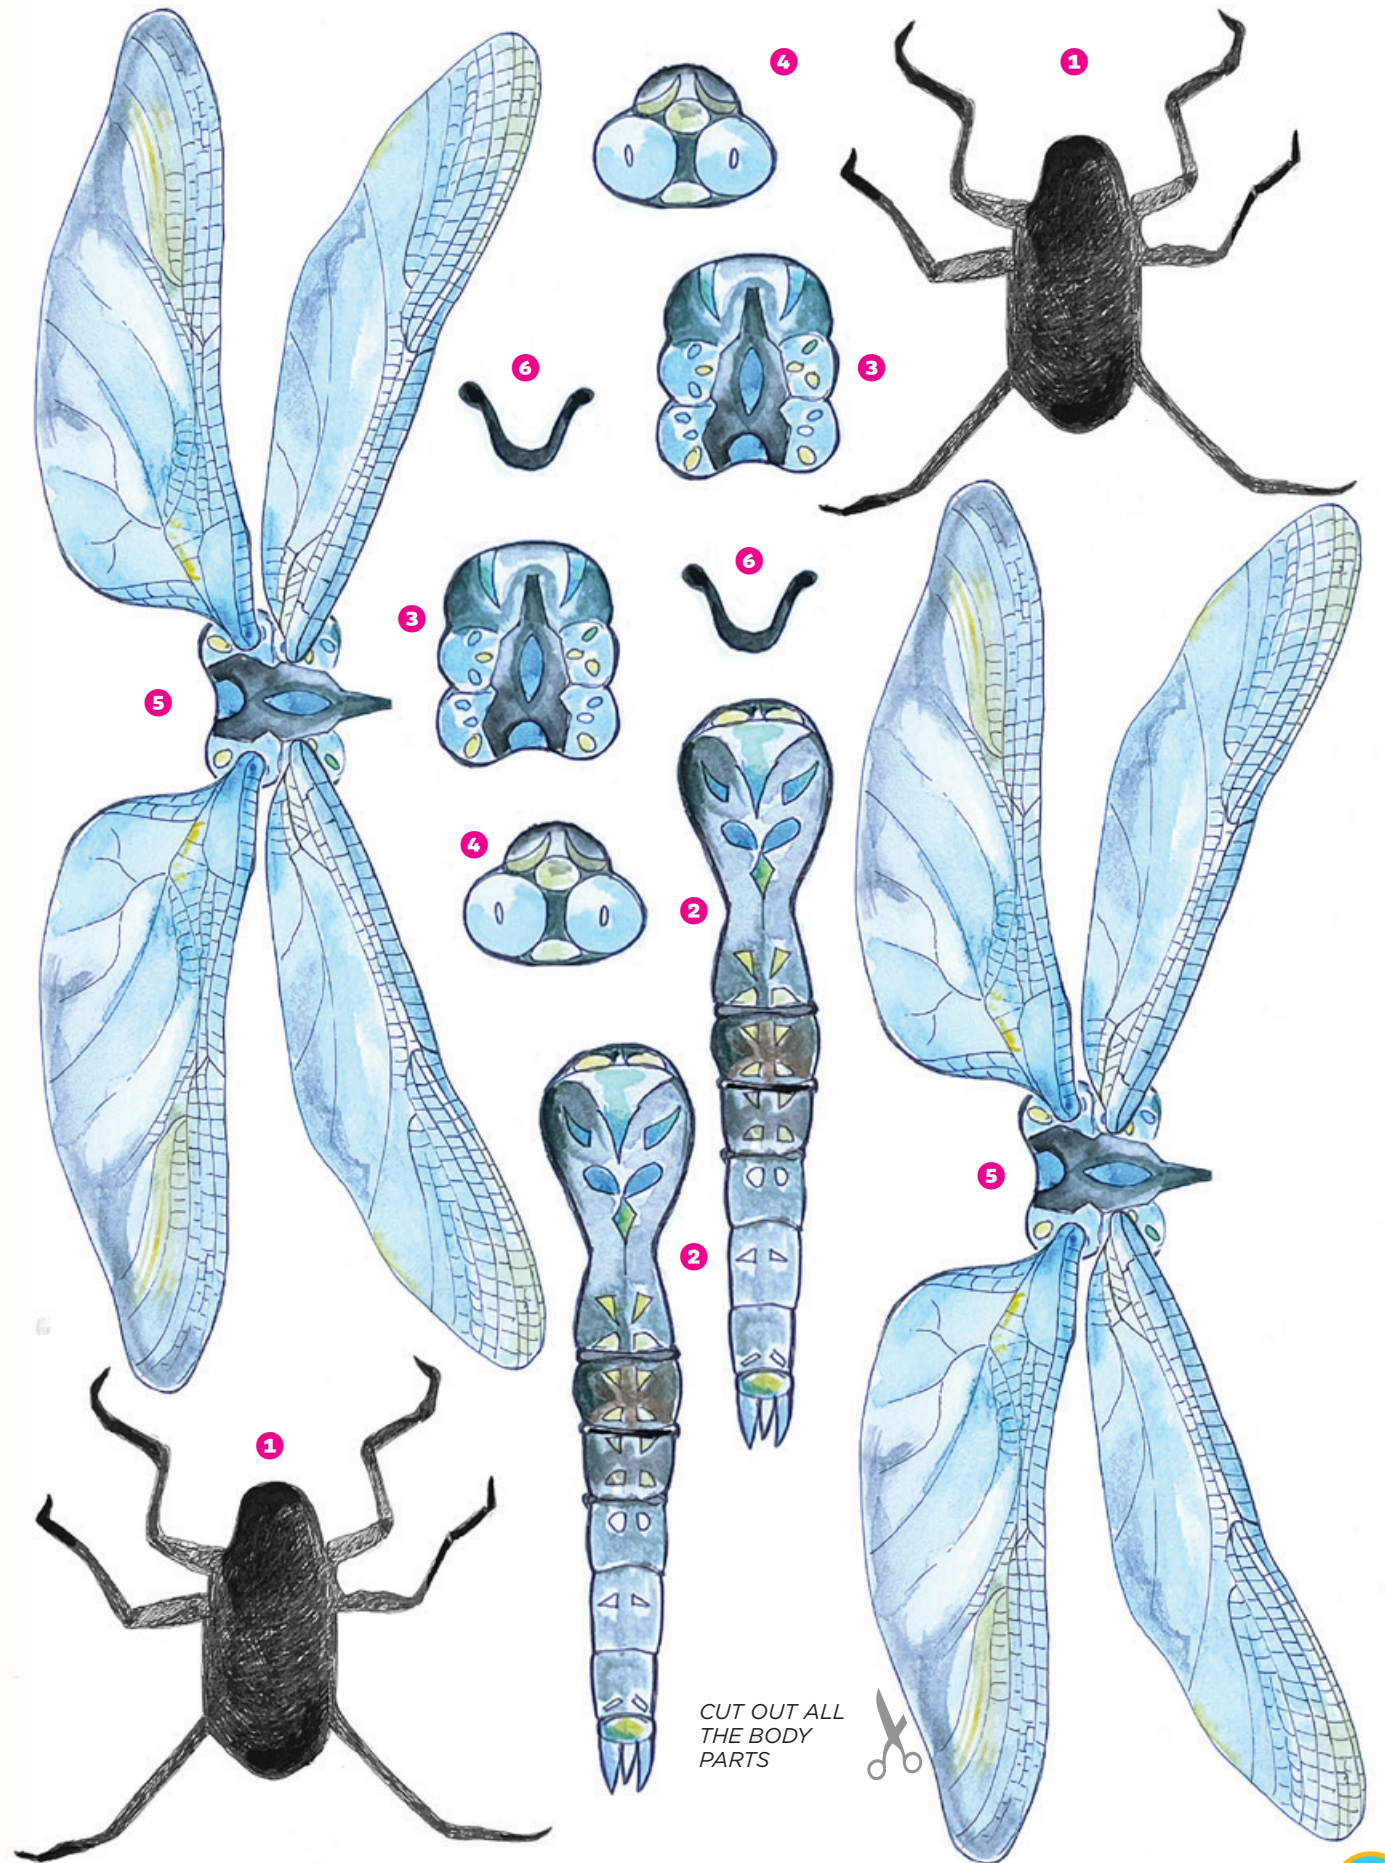

Why are dragonflies suited to a wetland environment? Find out and let us know your answer!

How to make the spinner:

- 1 Cut out spinner circle.
- 2 Back it with cardboard.
- 3 Place the small end of a paper clip on top of the black circle.
- 4 Push a drawing pin through the middle of the black circle to hold the paper clip.
- 5 Spin away!

FACT: Adult dragonflies and damselflies are easy to mix up. Remember that dragonflies sit with their wings flat, but damselflies sit with them folded above their back.
